

The length of the arc for the same circumferential angle is the same.

크기가 같은 원주각에 대한 호의 길이는
같다.

(The length of the arc for the same circumferential angle is the same.)

The length of the arc for the same circumferential angle is the same.

The length of the arc for the same circumferential angle is the same.

The length of the arc for the same circumferential angle is the same.

The length of the arc for the same circumferential angle is the same.

The length of the arc for the same circumferential angle is the same.

The length of the arc for the same circumferential angle is the same.

The length of the arc for the same circumferential angle is the same.

The length of the arc for the same circumferential angle is the same.

The length of the arc for the same circumferential angle is the same.

The length of the arc for the same circumferential angle is the same.

The length of the arc for the same circumferential angle is the same.

The length of the arc for the same circumferential angle is the same.

The length of the arc for the same circumferential angle is the same.

The length of the arc for the same circumferential angle is the same.

\therefore 원주각은 중심각의 크기의 반이다.

(In any circle, a circumferential angle is half the size of the central angle subtending the same arc.)

The length of the arc for the same circumferential angle is the same.

\therefore 원주각은 중심각의 크기의 반이다.

(In any circle, a circumferential angle is half the size of the central angle subtending the same arc.)

The length of the arc for the same circumferential angle is the same.

\therefore 원주각은 중심각의 크기의 반이다.

(In any circle, a circumferential angle is half the size of the central angle subtending the same arc.)

The length of the arc for the same circumferential angle is the same.

\therefore 원주각은 중심각의 크기의 반이다.

(In any circle, a circumferential angle is half the size of the central angle subtending the same arc.)

The length of the arc for the same circumferential angle is the same.

\therefore 원주각은 중심각의 크기의 반이다.

(In any circle, a circumferential angle is half the size of the central angle subtending the same arc.)

\therefore 중심각 크기가 같으면 호의 길이는 같다.

(The arcs of the same length for center angles are the same.)

The length of the arc for the same circumferential angle is the same.
